\*Wall heights shown are intended as a guide and not for construction purposes. **Note:** Gravity walls rely on unit weight and unit set-back to retain soils. Reinforced walls rely on unit weight, unit set-back and geogrid to retain and stabilize soils.

The symbol signifies that this product is suitable for building elevated wall heights using geogrid reinforcement or other design methods. Consult a licensed engineer for design assistance.

# Think color. Think Nicolock.

One look and you'll appreciate Nicolock's exceptional color palette – rich, deep and brilliant. And when it comes to choosing the perfect wall to suit any style, look no further than The Nicolock Wall Collection. We make it easy to choose the perfect wall for any residential or commercial installation. Look for Nicolock, where beauty, durability and functionality meet.

## LIFETIME WARRANTY

Nicolock provides a limited lifetime warranty on the structural integrity of its manufactured product line used in residential applications. Nicolock pavers are warrantied for as long as you own your home and are transferable to the next owner should you sell. Nicolock products installed in accordance with our guidelines and industry standards that are deemed to be structurally defective will be replaced with product of equal value. Removal and replacement labor cost is not the responsibility of Nicolock. Regarding de-icing products, Nicolock recommends sand for slip resistance as it is the most environmentally friendly product for use on concrete products to make sure surfaces are skid and slip resistant. If a de-icing product is used, Nicolock recommends using only NaCl (rock salt) and should be used sparingly, following the manufacturer's instructions. Once ice is loosened, remove immediately to avoid buildup of the de-icing agent. De-icing agents of any kind are not recommended for our Nicostone line.

Color matching and product availability are not guaranteed. Proof of purchase and/or installation contract must be made available prior to or at the time of inspection by an authorized Nicolock representative. Other exclusions apply.

Nicolock / Nicolite Concrete Products is the owner or authorized user of all patents and trademarks for products and designs illustrated herein. Firma®, Checker Block®, Sante-Euro® & paver-**shield**® are examples of registered trademarks of Nicolite Concrete Products. SF-Rima® is a trademark of SF Concrete Technology, Inc. Trinity® is a trademark of Earth Reinforcement Technologies. • US Patent # : Firma® 6,082,933.

# LANDSCAPE WALLS

Outdoor areas of any size or shape will be transformed with Nicolock's Landscape Wall Collection. Nicolock has the perfect selection of walls that will not only bring definition to your outdoor space but also work in harmony with the colors of our pavers. Strength, beauty and functionality are the hallmarks of Nicolock's wall stones, so you can build with confidence.

**COLONIAL WALL SYSTEMS** | The charming Colonial Wall System features a distinctive double-sided face, offered in hard-split rock face finish. It is available in three face lengths and includes corner units (packaged on a combined pallet). You can build the 3" or 6" wall individually or combine them for added dimension. There is also a prepackaged Colonial Pier to add the finishing touch to your wall.

# RETAINING WALLS

Nicolock's retaining walls are available in a wide variety of styles and colors, offering numerous design possibilities. Our retaining walls can be used to create a barrier to prevent erosion or capture additional outdoor space by leveling the grade that might otherwise be uneven or sloped. Typically, a retaining wall may be part of a system that includes geogrid and may require engineering. You can count on Nicolock's residential and commercial retaining walls to add natural beauty to any outdoor space.

**FIRMA® WALL |** The Firma® Wall is a segmental retaining wall with a natural split-face texture. Its classic line complements any natural or architectural landscape. A solid block with tapered sides, this wall system combines rich color, form and function into your project.

# RETAINING WALLS

**EVERLOC™ 810 EXPRESS WALL** | Everloc™ is a lightweight, one-square foot retaining wall system. Dress joints and radius edges create a three-piece, random appearance from one basic shape. System consists of a wall unit, corner, utility (to maintain bond at ninety degree outside corners) and a cap. Hollow core design and unique locking mechanism allows for quick and easy installation. Everloc™ is a user friendly system with little to no saw cutting due to its cutting edge corner and utility combo design.

# GARDEN WALLS

A photograph of a multi-tiered stone garden wall made of light-colored, rectangular blocks. The wall is surrounded by lush greenery and flowers. On the left, there are white daisies and yellow variegated plants. On the right, there are purple flowers and yellow variegated plants. The wall is set in a garden bed with green grass at the bottom.

Whatever Nicolock garden wall style you select, you will have a variety of sizes and colors to choose from. The addition of a garden wall can help provide visual interest acting as a border between an installed feature and the rest of the landscape. Garden walls are low walls and not meant to withstand the weight or pressure of soil. They are best suited for tree rings, edgings and garden borders.

**GARDEN WALL** | A pleasing 4"x12" garden wall with straight lines and a rear lip connection. This single-sided wall has tapered lines and is perfect for small applications in straight or serpentine walls.

# RETAINING WALL INSTALLATION

## Materials Needed

- Gloves
- Tape Measure
- Stakes
- Shovel
- 3 lb. Hammer
- Levels
- Line Level
- Carpenters Square
- String Line
- Broom
- Wheelbarrow
- Pry Bar
- Wire Cutters
- Mason's Chisel
- Markers
- Screed Board
- Two 1" o.d. Screed Pipes
- Plate Compactor
- Paver Cutter
- Diamond Blade Table Saw

NOTE: The following Installing procedures apply to all Nicolock retaining wall units constructed as a conventional gravity wall system.

**PREPARING/EXCAVATING:** Before beginning excavation, make sure there are no utility lines in the wall area. Excavate area to the proper depth. For geogrid-reinforced retaining walls or for more detailed information, consult your local distributor or contact Nicolock.

For most non-critical walls (and under favorable soil conditions) Nicolock wall units are constructed as a conventional gravity wall system. Walls up to 3 feet in height (2 ft. 6 in. for Sierra) are attainable without the need for soil reinforcement (geogrid). Recommended installation procedures should be followed to ensure the life of your wall structure.

### 1. SITE PREPARATION AND EXCAVATION

Excavate a trench a minimum of 6" beyond the front and back of the wall block. Dig trench 9" to 14" deep, enough to create a 6" thick leveling pad and to bury at least one whole wall block below grade. Compact the soil at the bottom of trench. Shape the slope behind wall to allow for 12" of drainage material.

### 2. INSTALL LEVELING PAD

Place filter fabric in trench and up the cut slope. Fill trench with clean, graded aggregate and compact.

### 3. PLACE BASE COURSE (FIRST ROW)

Position a level string line at the straight face of the unit to maintain alignment. Place the wall units side by side in the center of the prepared base. Bury the first course of block below grade to a depth equal to 10% of the height of the wall or a minimum of 6", whichever is greater. Level units from side to side, and front to back.

### 4. DRAINAGE SET-UP

Fill the space in front of wall with clean fill to grade to hold units from shifting. Place a perforated pipe behind wall on top of base for drainage. Fill any block cores and the drainage area with clean aggregate keeping filter fabric in place. Backfill soil on outer side of fabric and compact.

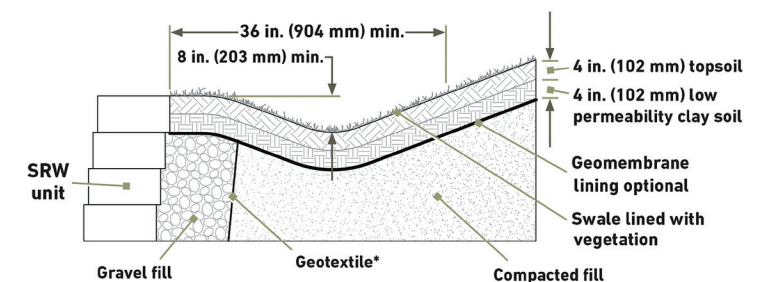

### 5. STACKING UNITS

Place successive courses by fitting the keys and grooves onto the units in the row below (if applicable). Keep the tops of each course clean to maintain a level surface. Stack units one layer at a time in a running bond pattern (crossing joints). Utilize geogrid when the wall height is 3 ft. or more or as required by the project engineer or approved design drawings.

### 6. PLACE GRAVEL AND BACKFILL MATERIALS

Continue building the wall to the desired height. Backfill with clean aggregate behind each course as completed. Backfill and compact soil. Finish the wall by securing the wall cap with a suitable masonry adhesive.

\*Geotextile may be necessary when the infill soil includes fine-grained sand that have the potential to infiltrate the gravel fill

**Note:** Illustrations shown are not for construction purpose. Please confer with your local engineer for proper placement of geogrid.

**Important:** Walls higher than 36" above grade, terraced walls, weak soils, and other loading conditions require special considerations in design and construction. This should be done by a qualified engineer & a professional contractor. Check with your local building department for code requirements.
